

oneportal

It is a collaborative web platform that allows you to work with customers / suppliers of SAP® Business One.

argentis

We give a solution to the commercial
and administrative management.

Why Oneportal ?

Oneportal was born as a basic need to solve a management problem and external access to SAP.

About this need Oneportal provides the user with the elements to work in an external way with the SAP environment and all the essential information that comes from the database, either creating orders, accessing reports, or managing activities. Commercially every company needs this management and through low-cost licenses can achieve it.

What is Oneportal?

It is a system that is installed on IIS, on the server connected to SAP. A system that runs through a browser without limiting devices and access, developed with technology .NET C #, HTML5, Java Script, Responsive.

Collaborative Solution

The possibility of generating a complete sales / purchase circuit, from the creation of a client to the closing of an order.

User Coverage

Give access to Sales Employees, Customers, Suppliers, or be an Administrator User, each with their portfolio information.

Licensing Benefits

Nowadays the costs define a business, OP provides access to SAP functions with Indirect or Instance licenses, with low implementation cost.

Battlecard

	OnePortal		SAP Mobile		SAP WebClient
Licensing	Instance license, Unlimites users.	✓	Licensed		SAP license, No license for Clients/Suppliers
Customization	Customized HTML5 code	✓	Limited		Wide
Road Map	Own Road Map– more flexibility	✓	SAP Road Map	✓	SAP Road Map
Rapid Deployment	4hs.basic installation (*1)	✓	+ 15 hs – B1F		No
Experience	+4 years of experience	✓	+8	✓	+15
Free Users 3*	3 users Free (*2)	✓	No		No

(*1) Basic installation depends or requirements. (*2) Users with limited access to information, mandatory consulting payment for activation.

Real time data

Real time transactions

For customers and suppliers to integrate live data

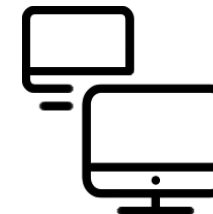

Visualize stock/ATP

Activities

Master Data

Keep track of opportunities, suppliers and customers with the master data module of business partners. Create, view, modify or delete business partner master data and review your account status.

Let your customers and suppliers edit their own information about your system, providing access to the master data module of business partners. Review the marketing documents of the BP and its impact on the accounts of the BP with the access Report of your BP.

Services Activities

Services/Activities

OnePortal gives you the opportunity to create or modify Activities and Services, this tool is an advantage to saving time and resources to increase employee productivity.

- > Assign Activities
- > Create Calls to Services
- > Tracking employees

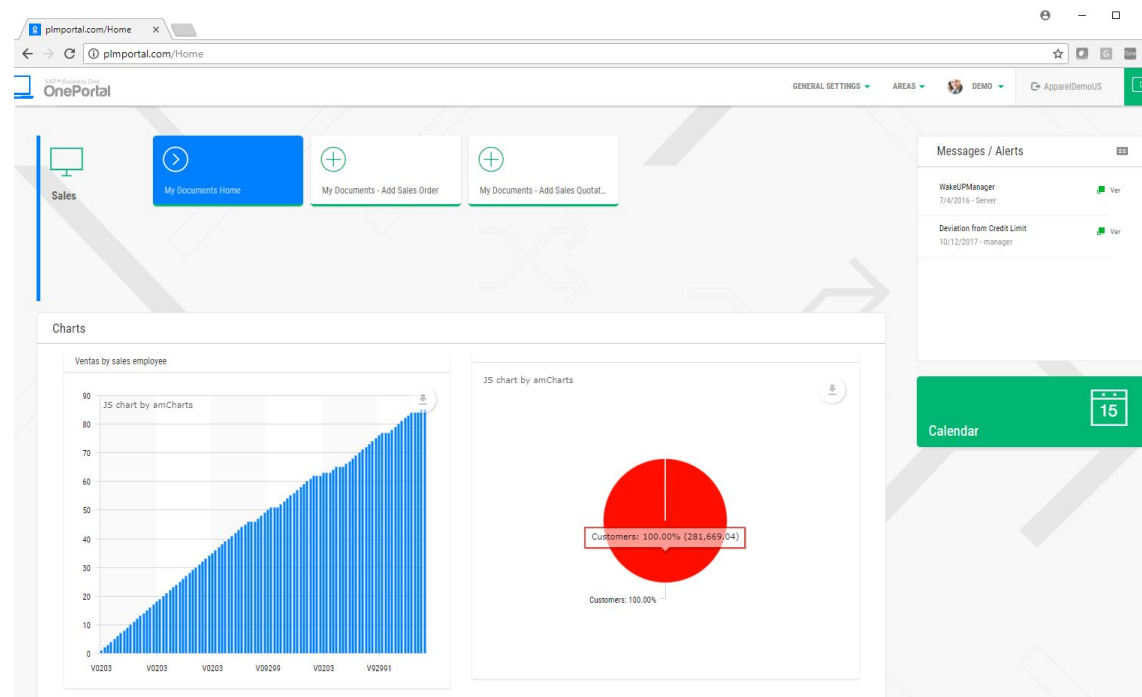

Reporting

Oneportal provides users with a reporting system by uploading Queries from SAP.

In this way, the SAP consultant can create customized reports to users and assign them to specific groups.

- > Customized reports
- > Assign reports to specific groups
- > Export to PDF, Excel format

Limitations

One Portal limitations come from DI Server connection and SAP limitations.

DI Server Orders

Orders cannot be created in the portal from the Draft state. * SAP issue.

DI Server Queries

The queries attached to an approval process are not executed by DI server.
* SAP issue.

Licensing Approvals

To use the approval scheme the user must have a 1st connection with a SAP user.

What is Portal?

Portal is NOT a SAP extension neither an APP. Billing, Production or Finance Modules are not included in the solution.
