Installation Guide

In this document, you will find how to install and uninstall WMS in the SBO Server, assign and unassign it to a company.

1.1 Windows Folders Security Permission

The add-on will need permission to create folders and write files during the installation, upgrade and also when using the different features WMS provides. These permissions depend on the Windows User that is logged in.

The default installation path for SAP Business One Client 32 bits is in C:\Program Files (x86)\SAP\SAP Business One\AddOns\ARGNS\WMS-Addon-Base. The default installation path for SAP Business One Client 64 bits is in C:\Program Files (x64)\SAP\SAP Business One\AddOns\ARGNS\ WMS-Addon-Base. However; the folders under the "Program Files (x86) & Program Files" directories have some restrictions to the common Windows Users and Users Group. Unless you manually change the security permissions in the folder under the "ARGNS" directory, you will need to install the Add-on in a directory where the Windows Users are allowed to Read, Execute & Write.

In case it is decided to install the add-on in the default path, please verify the Windows Users that are going to run the SAP Business One application have the permissions mentioned before. It is important to remember that every time the add-on is installed or upgraded, the folder "WMS-Addon-Base" and all its subfolders and files are deleted and created again so the permissions might be modified. That is why it is suggested to provide the permissions in the root folder "ARGNS" (that it is not deleted during an upgrade or re-installation) and also check that inheritance is enabled.

Security permissions for "ARGNS" should look like the following screenshot:

Lightweight Installation Procedure

1.2 How to install it in the Server

To install the add-on through the lightweight method, go to Add-on Administration → Manage Extensions for Lightweight Deployment.

		0.50	Preference			_

1.3 How to assign it to a Company

Next assign the Addon on to the SAP Company Database

SAP Business One Exte	ension Manager					Welcome
Extensions	Company Assignme	ent				
Company List	Database Name	ApparelDemo	US	Company Name	Appar Comp	el & Footwear Demo any
SBODEMOUS	Extensions					
apparelDemoLATAM	Assign U	nassign				
Apparel_ARG SBODemotex TEST	Name		Version	Provider	Enabled	Settings

Select the solution and click next:

Specify Extension	spec	ity an extension		
	-	Name	Version	Provider
	۲	WMS-Addon-Base	03022017	Argentis Consulting
Specify Parameters		N		
~		63		
Specify Startup Mode				
~				
Finish				

Assign the user defaults for startup mode

Specify Extension 📀	Default Startup Mode		Manual Automatic Manual
	User Preferences	User Name	Mandatory Disabled ode
pecify Parameters 🕑		manager	Default 🥒
		B1i	Default 🥒
		Workflow	Default 🥒
ecity Startup Mode		karl	Default 🥒
		karen	Default 🖉
Finish		rocky	Default 🥒
Finish		lucy	Default 🥒
		stefano	Default 🥒
		Support	Default 🥒

Login to the company and after a few seconds you will receive this message: "Add-on WMS-Addon-Base was successfully installed"

	System	Messages Log (12)									_7×

1.5 How to uninstall it from the Server

To uninstall the Add On, select the solution and click on the Remove

SAP Business One Extens X

Log in again in the SAP Client and a message in the System Messages Log will say:

Errors	5	✓ Warnings	Information	50 🔻 Last Messages to Display
-		Macrono		
1	i ,	Add-On WMS-Addon-B	ase is being uninstalled.	
	-			and the second se

Upgrade

To upgrade the add-on, first delete the older version from the server, then re-install it again and assign it to the corresponding companies.
